

Tech Setup

1. Install Python 3.

- Here's a [detailed guide](#) on how to install Python 3 for Mac and Windows.
- Make sure you have [pip](#) with your Python installation. Python's installers have included pip since version 3.4. Here's a [detailed guide](#) on pip.

2. Install Docker Desktop.

- Go to [this overview](#) of Docker Desktop, where you will find installation instructions.

3. Install Visual Studio Code.

- Here's [the official page](#), where you can download Visual Studio Code for your platform.
- You may notice I'm using the [dbt Power User extension](#) for VS Code. While installing this extension is not required, it's nice to have if you plan to work with dbt for bigger projects.
